

CENTERITY'S SERVICE PACK FOR SYNOLOGY NAS

KEY FEATURES

- In-depth monitoring of all critical metrics
- Real time data and historical graphs
- Dynamic critical and warning thresholds
- Monitoring Synology NAS components.

ADDED VALUE

- Easy configuration
- Improved performance and efficiency

Overview

Synology Inc. is a Taiwanese corporation that specializes in Network-attached storage (NAS) appliances. Striving to redefine what a NAS can achieve, Synology combines the features of public and private clouds to develop a hybrid cloud solution with a web-based platform, transforming NAS into a multi-functional device suitable for various purposes. With the Centerity Synology solution pack users can monitor critical metrics such as disk status, temperature, system status and more.

Synology NAS Available Metrics Example List

- **SYNOLOGY [CPU Fan Status]** - Synology cpu fan status.
- **SYNOLOGY [Disk Status]** - Synology disk status.
- **SYNOLOGY [Disk Temperature]** - The temperature of each disk in Celsius degree.
- **SYNOLOGY [Power Supply Status]** - Synology power status.
- **SYNOLOGY [Raid Status]** - Synology raid status.
- **SYNOLOGY [System Fan Status]** - Synology system fan status.

- **SYNOLOGY [System Status]** - Synology system status.
- **SYNOLOGY [Temperature]** – Synology system temperature.

The screenshot displays a comprehensive monitoring dashboard. On the left is a navigation menu with options like DASHBOARD, BUSINESS SERVICES, EVENT CONSOLE, NETFLOW, ROOT CAUSE, HOST GROUPS, REPORTS, MAPS, SYSTEM, ADD-ONS, and ABOUT. The main area is titled 'Dashboards' and contains several widgets:

- Availability:** Two donut charts showing 97% Health for Hosts and 94% Health for Metrics. A legend indicates Up (green) and Down (red).
- Health:** Two donut charts showing 97% Health for Hosts and 94% Health for Metrics. A legend includes Ok (green), Warning (yellow), Critical (red), and Pending (blue).
- Host Groups Status:** A table with columns for Host Group, Host Availability, and Metric Availability. It lists groups like Application_Servers, Big-Data, Cloudera, Database-Servers, Generic-Hostgroup, and Hardware.
- BSM Status:** A table with columns for BSM Name, Status, and Availability. It lists items like hgf, #, s, mentos, SAP-Hana-Nimble, and Harris.

Centerity proactively identifies and remediates service bottlenecks via consolidated dashboard, without switching between screens and multiple tools

About Centerity

Centerity’s award-winning software is an unified enterprise-class IT monitoring and performance analytics platform that improves performance and reliability of business services to ensure availability of critical systems. By delivering a consolidated view across all layers of the technology stack, including applications, Big Data, operating systems, database, storage, compute, security, networking, Cloud, Edge and IoT/IIoT devices, Centerity provides an early warning of performance issues along with corrective action tools to quickly isolate faults and identify root causes.
