

CENTERITY'S SERVICE PACK FOR WANDISCO FUSION

KEY FEATURES

- In-depth monitoring of all critical metrics
- Real time data and historical graphs
- Dynamic critical and warning thresholds
- Monitoring WANdisco data status

ADDED VALUE

- Easy configuration
- Improved performance and efficiency

Overview

WANdisco Fusion gives users live and consistent data in Big Data & Cloud environments - consistent data everywhere, spanning platforms and locations, even for changing data at petabyte scale. Business critical data is guaranteed consistent, always available, and accessible from anywhere. The Centerity monitoring for WANdisco is offered via the WANdisco Fusion API.

WANdisco Fusion Available Metrics Example List

- **WANdisco Fusion [Consistency]** - Checks WANdisco Task consistency state via API
- **WANdisco Fusion [Tasks]** - Check WANdisco Task Status via API
- **WANdisco Fusion [GSN]** - Compare WANdisco GSN among multiple clusters via API

About Centerity

Centerity’s award-winning software is an unified enterprise-class IT monitoring and performance analytics platform that improves performance and reliability of business services to ensure availability of critical systems. By delivering a consolidated view across all layers of the technology stack, including applications, Big Data, operating systems, database, storage, compute, security, networking, Cloud, Edge and IoT/IIoT devices, Centerity provides an early warning of performance issues along with corrective action tools to quickly isolate faults and identify root causes.
